REBETON

Strato Paris Office Building

The company

REBETON is an independent family business with its production site located in Belfort, France. For 40 years, REBETON has been designing, manufacturing, and marketing mineral cladding solutions for facades and floors, suitable for both outdoor and indoor use.

REBETON is, above all, the story of a family business. In 2017, the second generation succeeded the founder to continue and expand this remarkable success. Four decades of building your projects and writing our story. This longevity is the result of a human adventure, a quest for innovation and excellence, perseverance, and a relationship of trust established over the years with our project owners and partners.

Thanks to the creation of our ACRYTHERM® product, with its unique material and remarkable properties, we are able to provide a technology capable of adorning the most prestigious buildings as well as architectural structures.

The product

Manufacturing

Our ACRYTHERM® mineral tiles are entirely manufactured in-house at our Bethonvilliers plant. A mortar composed of raw materials is poured into our moulds. After vibration, they are stored for an hour for polymerization. Once demoulded, the tiles can either be shipped in their raw state or cut like natural stone, then finished according to your specifications using our unique expertise.

Composition

Comprised of 90% quartz, this unique material is a composite that blends quartz of various grain sizes with a high-performance methacrylate resin. The colour is mass-tinted and achieved using mineral pigments.

Characteristics

. 100% recyclable material
. zero porosity
. the best weight-to-strength ratio of all materials
. an innovation that limits CO_2 emissions and is more durable than concrete.

ACRYTHERM®

All the qualities of custom made

. exceptional dimensions
. freedom of expression in shapes
. unique textures

Unyielding resistance

. wear resistance (corrosion and abrasion)
. resistance to pollutants and atmospheric agents
. UV resistance
. impact and flexural resistance
. resistance to external aggressions and the test of time

BGL BNP Paribas Luxembourg Bank Center

Certification & labels

At REBETON, quality is priceless.
Our certifications and labels are true benchmarks of quality, performance, and reliability, serving as testimony to our daily commitment to showcase our experience and expertise. Meeting your expectations and specifications is essential to us.

Our ACRYTHERM® product and solutions are accredited to enable you to embark on a sustainability certification process.

Environmental commitments

Aware of the environmental challenges and concerned about the future, we are committed every day to contributing to the respect and protection of the environment.

Raw materials proximity to production site

Mindful of our carbon footprint, we are committed to sourcing raw materials near to our production site.

Low energy resource consumption

Our production requires very low energy consumption. Polymerization occurs at room temperature, with electricity primarily used to power our processing machines.

Filtration & water recycling

The water used in the transformation process (calibration, cutting, drilling, etc.) of our ACRYTHERM® product is solely for cooling diamond tools. Afterward, it is filtered and recycled.

Waste recycling

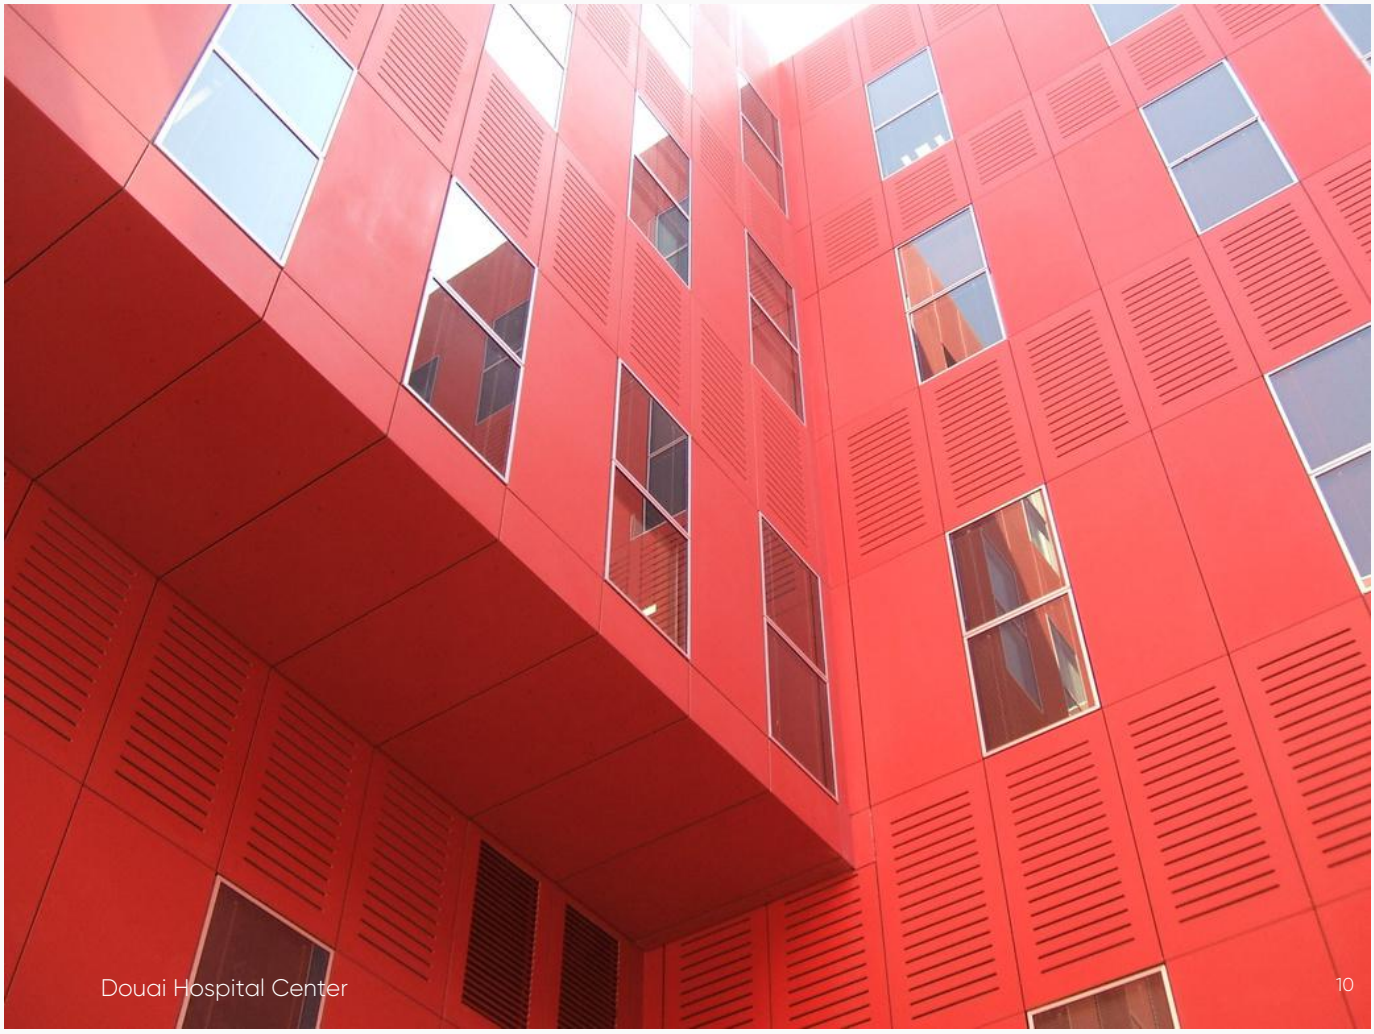

The scraps from the manufacturing process are repurposed as fill material and further utilized by other professional entities for added value.

ISO 14001 Certification

Proof and recognition of our commitments, our production site obtained ISO 14001 certification in 2022. Our organizational principles affirm our commitment to pollution prevention, compliance with regulations, and environmental respect across all our activities, from design and manufacturing to the sale of our products and solutions.

Colors & finishes

Coloured throughout the mass using mineral-based pigments and without applied finishes, our ACRYTHERM® product offers a variety of surface textures and colours with a uniformity rarely found in nature. Whether you seek a glossy finish, a mat appearance, or a polished stone look, the range of possibilities we offer is limitless.

Embrace three-dimensional shapes

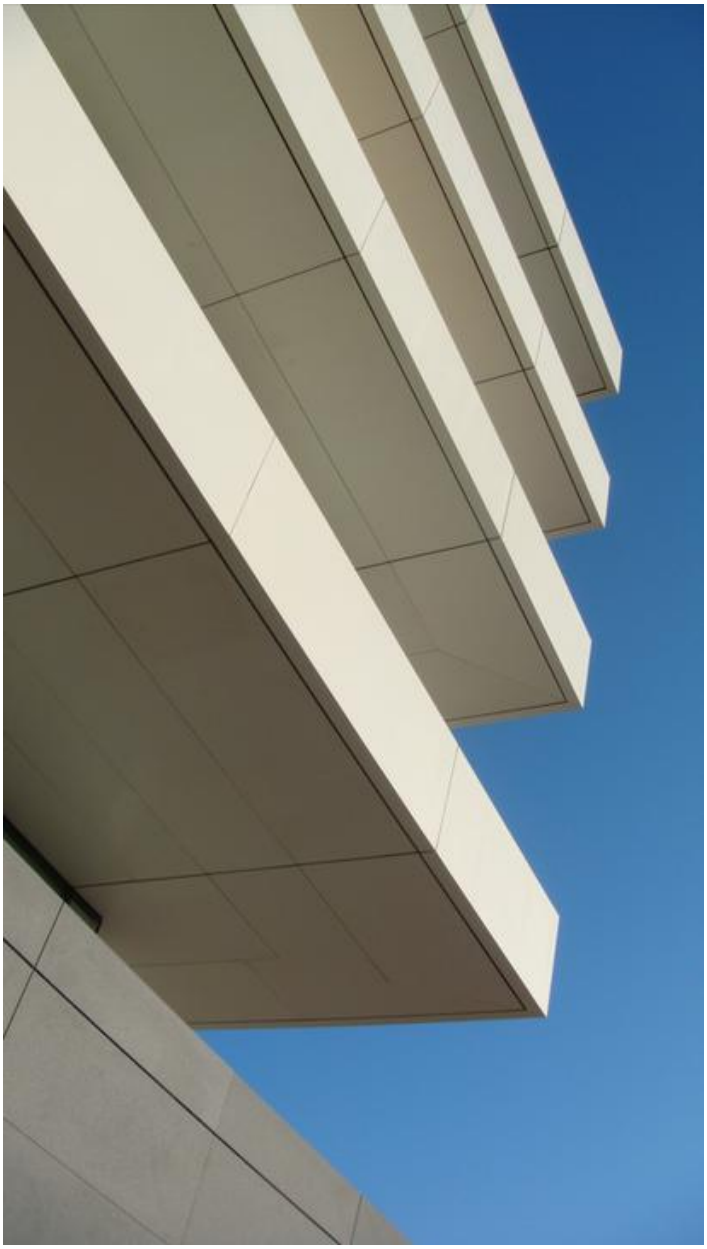

With our bespoke solutions, unleash your imagination and explore volumetric possibilities without being constrained by weight concerns.

Up to 300 mm, our assemblies require no reinforcement or fixation. These features ensure a straightforward structure and ease of installation.

To achieve flawless finishes and impeccable corner quality, all our components are manufactured directly at our production site. We cater to any desired angle, delivering customized solutions tailored to your needs.
